Project Milestone #5

Prancing Purple Ponies - Sko Play

Hyden Polikoff - Randy Perecman - Paolo Castro - Thomas Deaner - Sung Kim - Nathan Straub

---

Testing Plan

Each team developed tests related to the views and functionality they created.

Main Feed - Hyden and Paolo

- Users should be able to view all joinable events when they view the main feed screen.
- Users should be able to RSVP Yes/Maybe to joinable events when the appropriate button is clicked.
- No events for which their meetup time has already passed should be displayed in the main feed.
- Every event card should display accurate data about its respective event.

Login/Signup - Nathan and Thomas

- Email address should be a valid @colorado.edu address, validated by proper authentication functions
    - *Testing Idea: Implement RegEx function to validate "@colorado.edu" and use google API to sign in*
    - *Testing Idea: Make a text file with a mix of emails, both @colorado and other addresses, check database if all addresses are @colorado.edu*
- Data should always be passed into database correctly (full name, email, password) and user won't be able to sign up until all data values are entered
    - *Testing Idea: Pass a bunch of data through the system and have the system output (idk how) the same data. Make sure there are no differences*
- Check for NO overlaps in data (email, full name(?))

    - *Testing idea: Make a text file with a bunch of dummy emails and pass them through the system. Check for overlaps*
- Cap the maximum number of characters for both username and password
    - *Testing Idea: Set maximum character value to 20 and give error message if exceeded*

Create Event - Randy and Sung

- User should be able to fill in all fields and successfully create an event
- User should receive error when the create event fails
    - Testing idea: enter random/ dumb values to test for return in errors
- Mandatory fields include:
    - Sport
    - Location
    - Date/time
- The form provides the user with specific feedback about the error; which fields are invalid/empty.

Individual Contributions

- **Paolo:**
    - Completed the RSVP “Yes” and “Maybe” feature with validation to make sure users can’t RSVP twice. Also made sure that users can’t RSVP both “Yes” and “Maybe”.
    - Last commit: https://github.com/CSCI-3308-CU-Boulder/Prancing-Purple-Ponies/commit/98ebe4f2c8d4da44824dbc1184d065c93176ef2e
- **Hyden:**
    - Completed the front end assets for the RSVP feature including dynamically styling buttons and counters.
    - Last commit: https://github.com/CSCI-3308-CU-Boulder/Prancing-Purple-Ponies/commit/d85efacf520fbbbfb5c2efa37afb1fc0ff43a553
- **Sung:**
    - Developing drop down for sport selector without changing the variables formik passes to the firebase backend code, in order to make implementation better. Also working on time selector and a new modal/page to show more information about the meetings created, for better user experience.

    - Did not commit the work in progress state above, to not break any working code other people are using to develop their side of work.
    - Last commit: https://github.com/CSCI-3308-CU-Boulder/Prancing-Purple-Ponies/commit/19b94a6d9bf31e0feba61e06ad05d8a5535b9666
- **Nathan:**
    - Still in the process of developing the profile page. I was having trouble implementing a feature that would allow users to upload their own profile picture but I've found a good resource now and should have that finished by next week
    - Last commit: https://github.com/CSCI-3308-CU-Boulder/Prancing-Purple-Ponies/commit/97b6704749ca1e37e7aefd8b61da66a7f67417c3#diff-acc387270f9210a80b5377d39629ab0e8c44505fca00acc182392ecb42aabced
- **Randy:**
    - Worked on styling for the app while Sung works on the create event form because my next tasks are dependent on that. I have also collaborated with Sung in choosing a time selector element.
    - Last commit: https://github.com/CSCI-3308-CU-Boulder/Prancing-Purple-Ponies/commit/64c95b5e413194e248c176585a3ee5e3570221b2
- **Thomas:**
    - Worked on Sign-up/Login screen functionality and authentication features. Having trouble with pushing custom values (Name of user) to firebase. Will aim to finally complete sign-in/login backend code during the next week and work on backend code for the profile page once the frontend code is complete.
    - Last commit: https://github.com/CSCI-3308-CU-Boulder/Prancing-Purple-Ponies/commit/c27236f434e4da73311c677f1d4f01342b347d78
